

The 24V Method

PedalSnake®, the world's first configurable, multi-channel pedals-to-amp cable system, teamed up with Strymon® for a quieter method of powering pedals, and to *eliminate the AC power cord!*

The Elegant Solution
Quieter
Cleaner
Faster

patented technology (919) 749-8219 PedalSnake.com

The 24V Method

PedalSnake's quiet, low voltage, guitar-pedal-amp cable system is a perfect match for Strymon's state-of-the-art pedal power supplies—the Ojai and Ojai R30—powered **not by noisy AC**, but with ultra-quiet 24V DC.

The result is not only a faster, neater setup, but also—**no AC power extension cord to run**—and nothing but quiet DC anywhere near sensitive pedal circuits.

Check out Jake Morelli's clean stage area, and check what all is in that single PedalSnake cable. And—he setup **fast**.

24V-sourced power supplies—
the Ojai and Ojai R30
